

Project Development Phase

Works Done on Each Sprints

Date	14.11.2022
Team ID	PNT2022TMID28817
Project Name	Inventory Management System for Retailers

Introduction:

1. Sprint 1 – Backend
2. Sprint 2 – Frontend
3. Sprint 3 – IBM Cloud Integration + Integration of SendGrid
4. Sprint 4 – Deploying the application using Docker and Kubernetes

Sprint 1 – Backend:

All the routes to each page and APIs are created.

Example, (For Products page)

The screenshot shows a Visual Studio Code editor with the following components:

- Explorer Sidebar:** Displays the project structure for 'IMSR-1'. It includes files like `__pycache__`, `templates`, `app.py`, `email_alert.py`, and `requirements.txt`.
- Main Editor:** Shows the code for `app.py`. The code includes a database connection, a route for products, and a route for locations. The `products` route is highlighted with a yellow cursor.
- Terminal Panel:** Shows the output of the application. It includes a warning about using a development server and a message about restarting with `stat`.

```

22
23 #Products
24 @app.route('/products')
25 def products():
26     sql = "SELECT * FROM products"
27     stmt = ibm_db.prepare(conn, sql)
28     result=ibm_db.execute(stmt)
29
30     products=[]
31     row = ibm_db.fetch_assoc(stmt)
32     while(row):
33         products.append(row)
34         row = ibm_db.fetch_assoc(stmt)
35     products=tuple(products)
36     #print(products)
37
38     if result>0:
39         return render_template('products.html', products = products)
40     else:
41         msg='No products found'
42         return render_template('products.html', msg=msg)
43
44 #Locations
45 @app.route('/locations')
46 def locations():
47

```

Terminal Output:

```

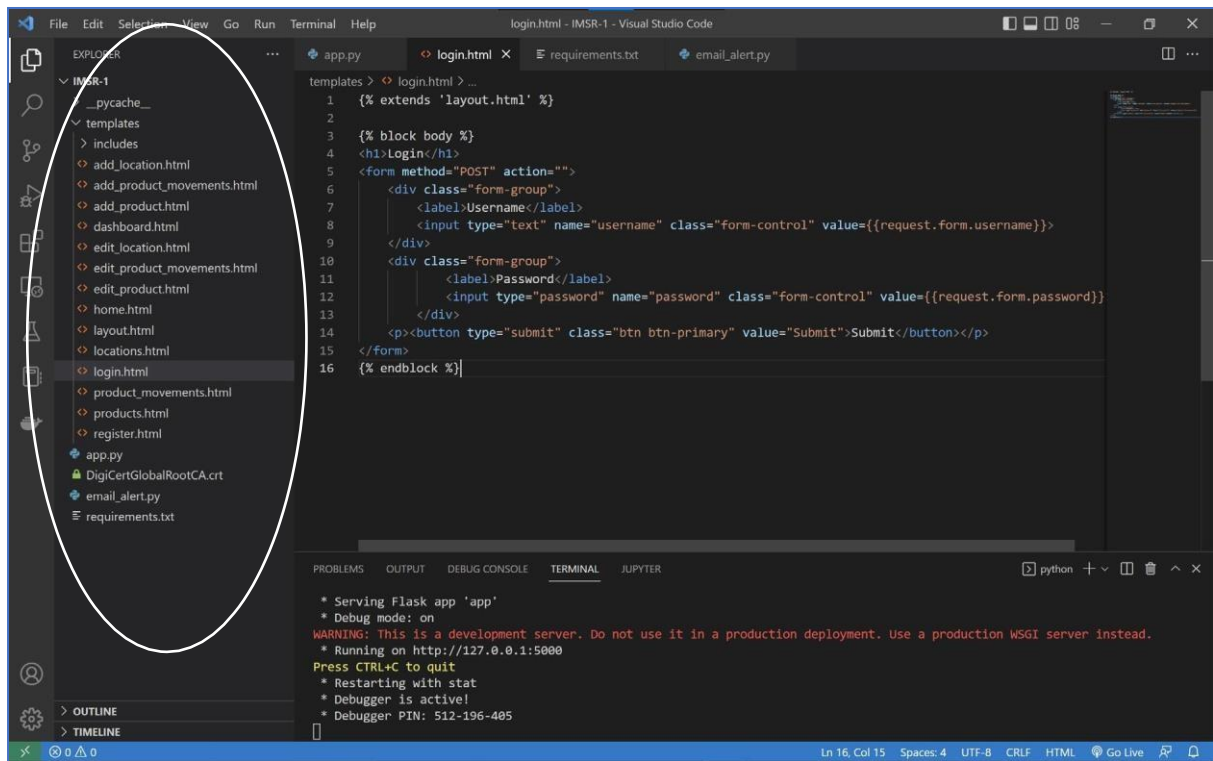

* Serving Flask app 'app'
* Debug mode: on
WARNING: This is a development server. Do not use it in a production deployment. Use a production WSGI server instead.
* Running on http://127.0.0.1:5000
Press CTRL+C to quit
* Restarting with stat
* Debugger is active!
* Debugger PIN: 512-196-405

```

Sprint 2 – Frontend:

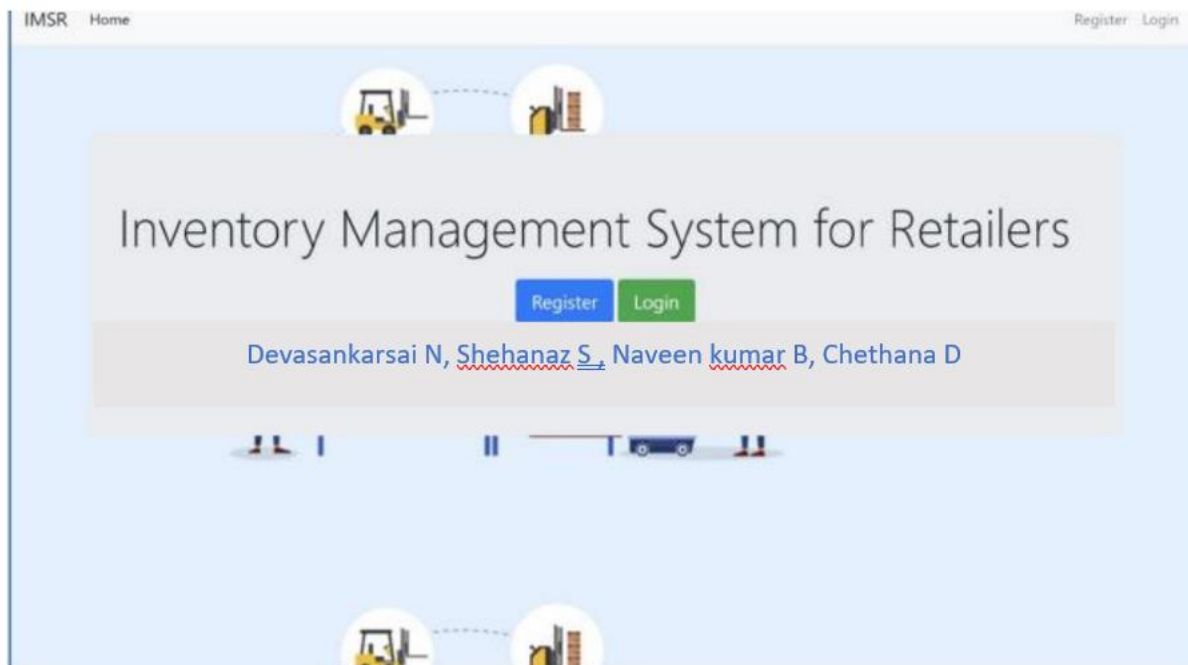

The frontend is written using HTML, CSS (using Bootstrap) and JavaScript for all the pages to which the routes created in Sprint 1.

For Example, (The Hierarchy of different pages and the code for login page)

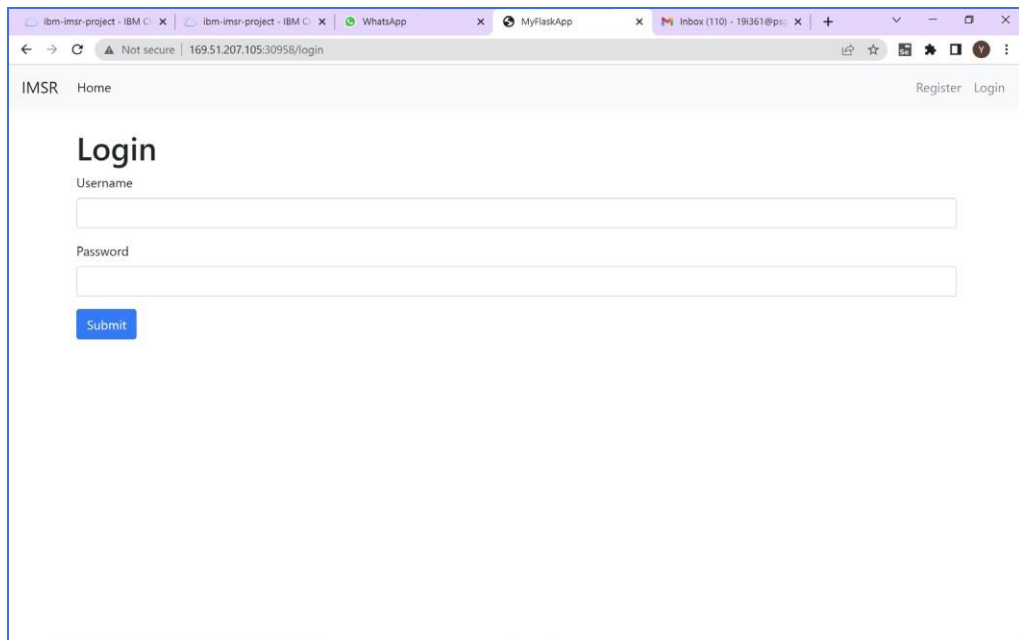

Sample FrontEnd Pages,

Home Page,

Login Page,

A screenshot of a web browser displaying the IMSR Login page. The browser's address bar shows the URL "169.51.207.105:30958/login". The page has a header with "IMSR Home" on the left and "Register Login" on the right. The main content area features a "Login" heading, followed by "Username" and "Password" labels, each with a corresponding text input field. A blue "Submit" button is positioned below the password field.

Products Page,

The screenshot shows the 'Products' page of the IMSR application. The browser's address bar displays '169.51.207.105:30958/products'. The navigation bar includes 'IMSR', 'Home', 'Products', 'Location', 'Product Movements', 'Logout', and 'Dashboard'. Below the navigation bar, the page title 'Products' is followed by a green 'Add Product' button. A table lists three products: 'Bedspreads' (Cost: 600, Quantity: 100), 'Cutlery' (Cost: 1500, Quantity: 495), and 'Shampoo' (Cost: 50, Quantity: 520). Each product row has 'Edit' and 'Delete' buttons.

Product ID	Product Cost	Product Quantity		
Bedspreads	600	100	Edit	Delete
Cutlery	1500	495	Edit	Delete
Shampoo	50	520	Edit	Delete

Product Movements Page,

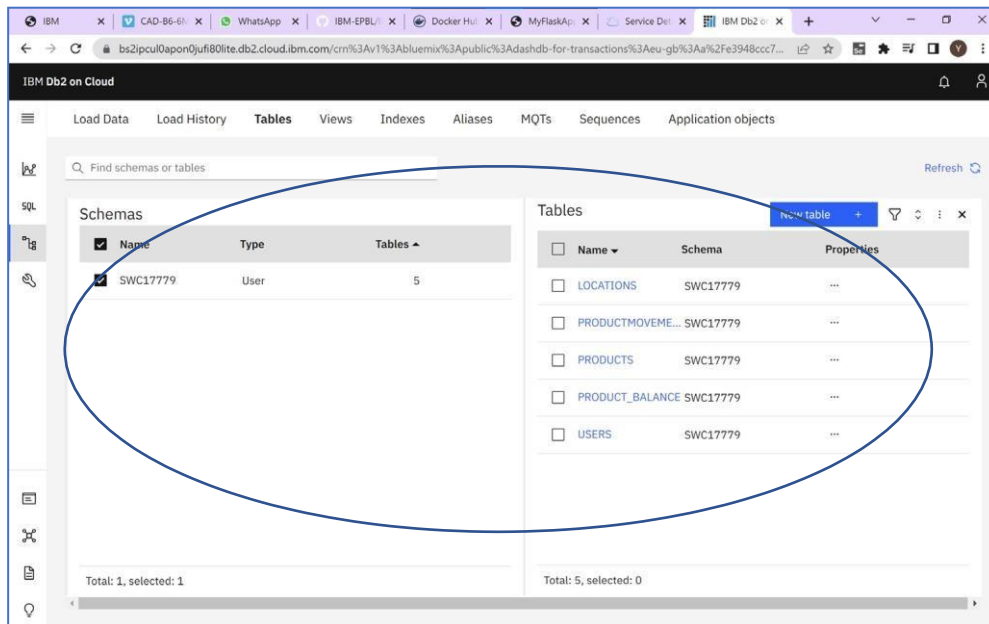

The screenshot shows the 'Product Movements' page of the IMSR application. The browser's address bar displays '169.51.207.105:30958/product_movements'. The navigation bar is identical to the previous page. Below the navigation bar, the page title 'Product Movements' is followed by a green 'Add Product Movements' button. A table lists three movements: Movement ID 41 (Time: 2022-11-14 04:32:57.213981, From Location: Chennai, To Location: Main Inventory, Product ID: Shampoo, Quantity: 20), Movement ID 42 (Time: 2022-11-14 04:51:47.519001, From Location: Chennai, To Location: Karnataka, Product ID: Shampoo, Quantity: 1553), and Movement ID 40 (Time: 2022-11-14 03:57:52.649656, From Location: Bangalore, To Location: Chennai, Product ID: Shampoo, Quantity: 100). Each movement row has a 'Delete' button.

Movement ID	Time	From Location	To Location	Product ID	Quantity	
41	2022-11-14 04:32:57.213981	Chennai	Main Inventory	Shampoo	20	Delete
42	2022-11-14 04:51:47.519001	Chennai	Karnataka	Shampoo	1553	Delete
40	2022-11-14 03:57:52.649656	Bangalore	Chennai	Shampoo	100	Delete

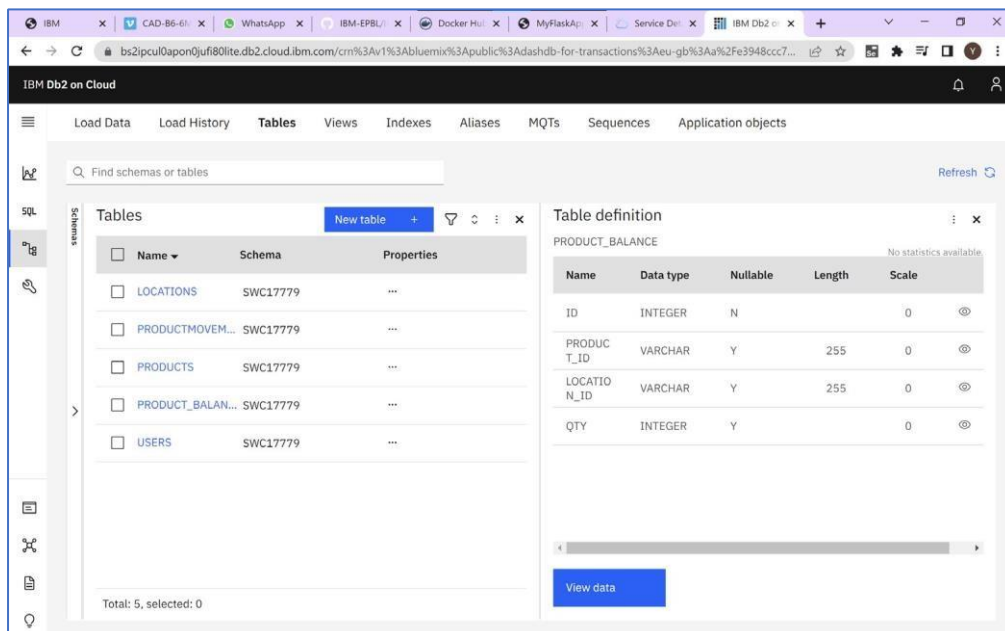

Sprint 3 - IBM Cloud Integration + Integration of SendGrid:

IBM Cloud Integration:

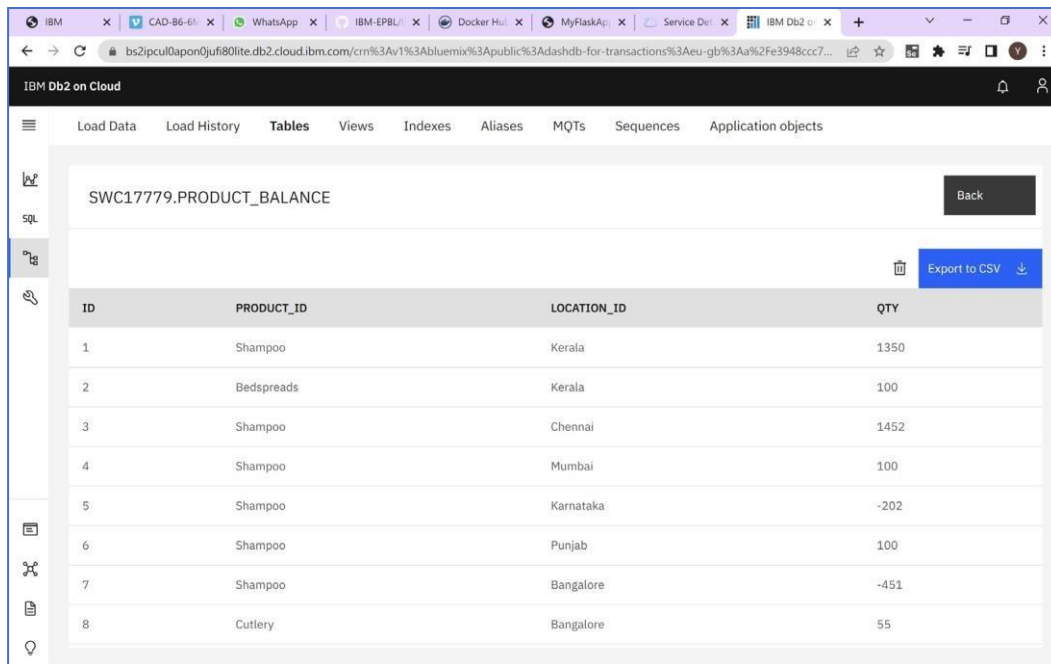

5 tables created for our project,

Schema of the particular table (For Example, Product_Balance)

Data of a particular table (For Example, Product_Balance)

ID	PRODUCT_ID	LOCATION_ID	QTY
1	Shampoo	Kerala	1350
2	Bedspreads	Kerala	100
3	Shampoo	Chennai	1452
4	Shampoo	Mumbai	100
5	Shampoo	Karnataka	-202
6	Shampoo	Punjab	100
7	Shampoo	Bangalore	-451
8	Cutlery	Bangalore	55

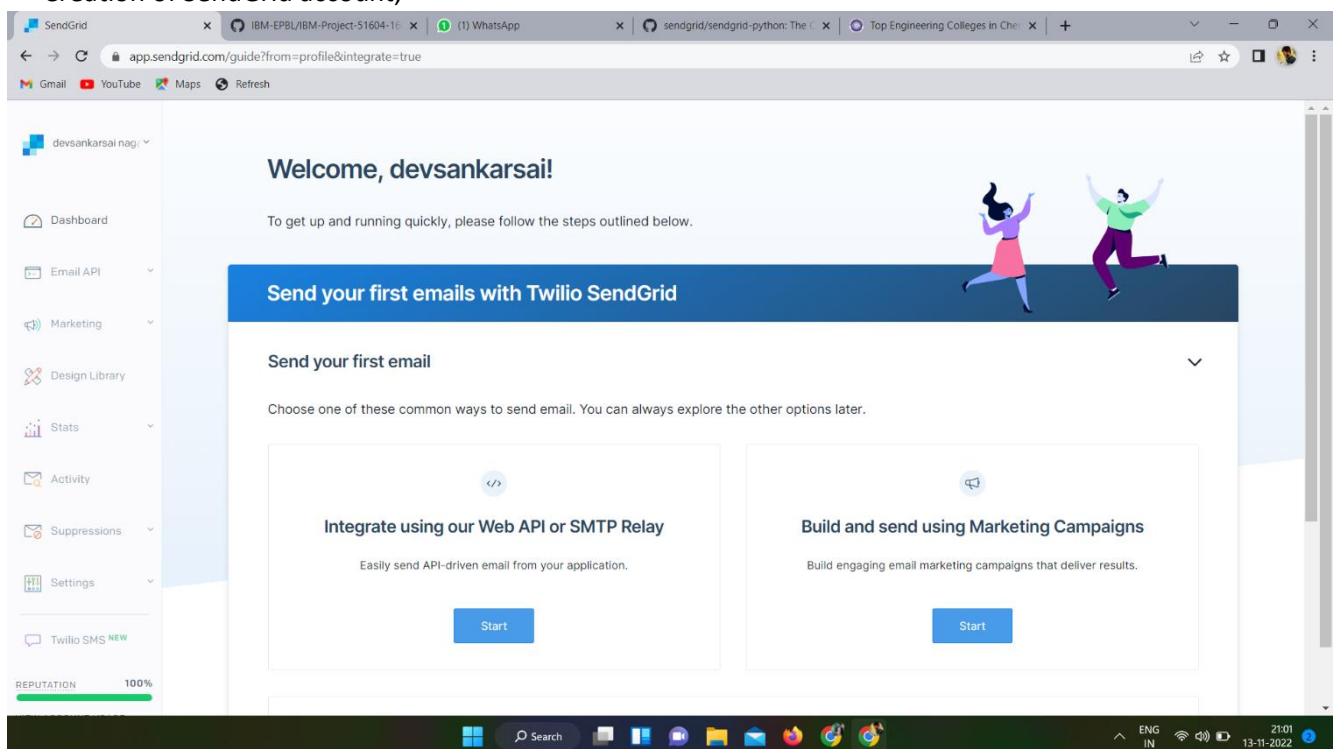

Code for Connection of IBM Database,

```
conn=ibm_db.connect("DATABASE=bludb;HOSTNAME=55fbc997-9266-4331-afd3-888b05e734c0.bs2io90l08kqb1od8lcg.databases.appdomain.cloud;PORT=;SECURITY=SSL;SSLServerCertificate=DigiCertGlobalRootCA.crt;UID=;PWD=;", "", "")
```

Note: DigiCertGlobalRootCA.crt should be downloaded and configured within the project folder.

SendGrid Integration:

Creation of SendGrid account,

Welcome, devsankarsai!

To get up and running quickly, please follow the steps outlined below.

Send your first emails with Twilio SendGrid

Send your first email

Choose one of these common ways to send email. You can always explore the other options later.

Integrate using our Web API or SMTP Relay

Easily send API-driven email from your application.

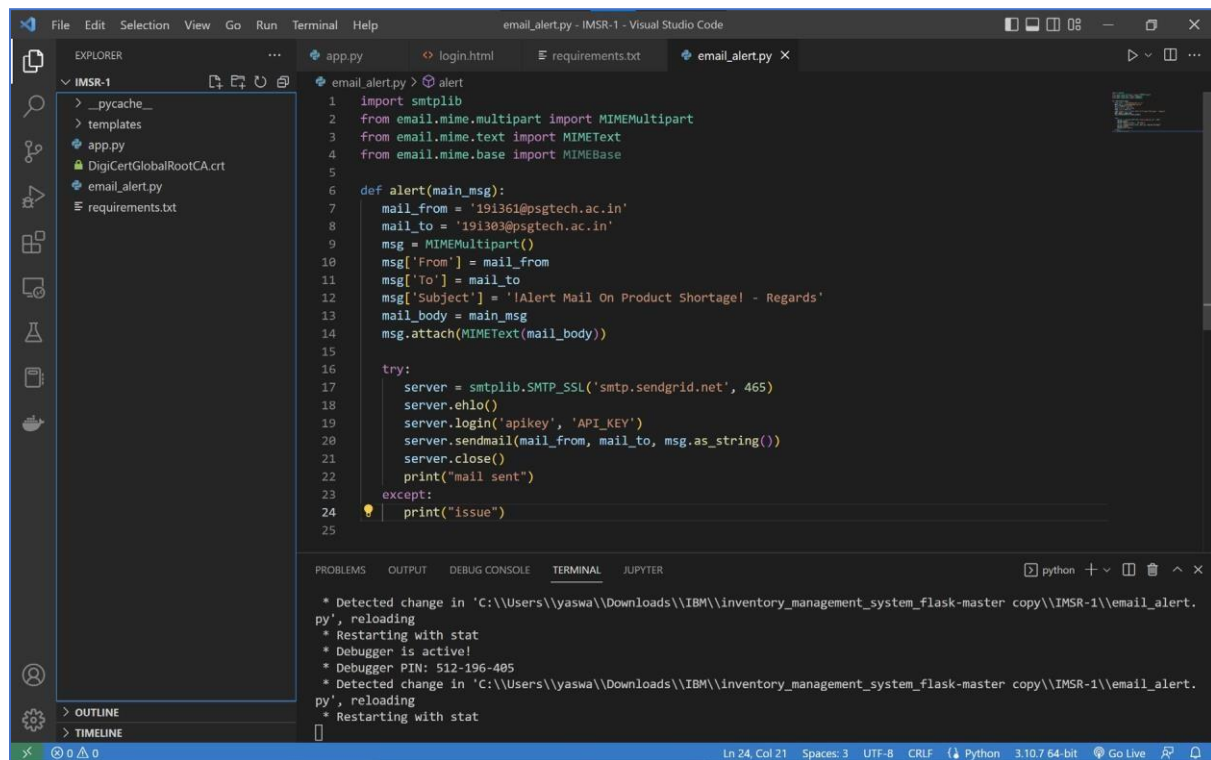

[Start](#)

Build and send using Marketing Campaigns

Build engaging email marketing campaigns that deliver results.

[Start](#)

Code for email alert:

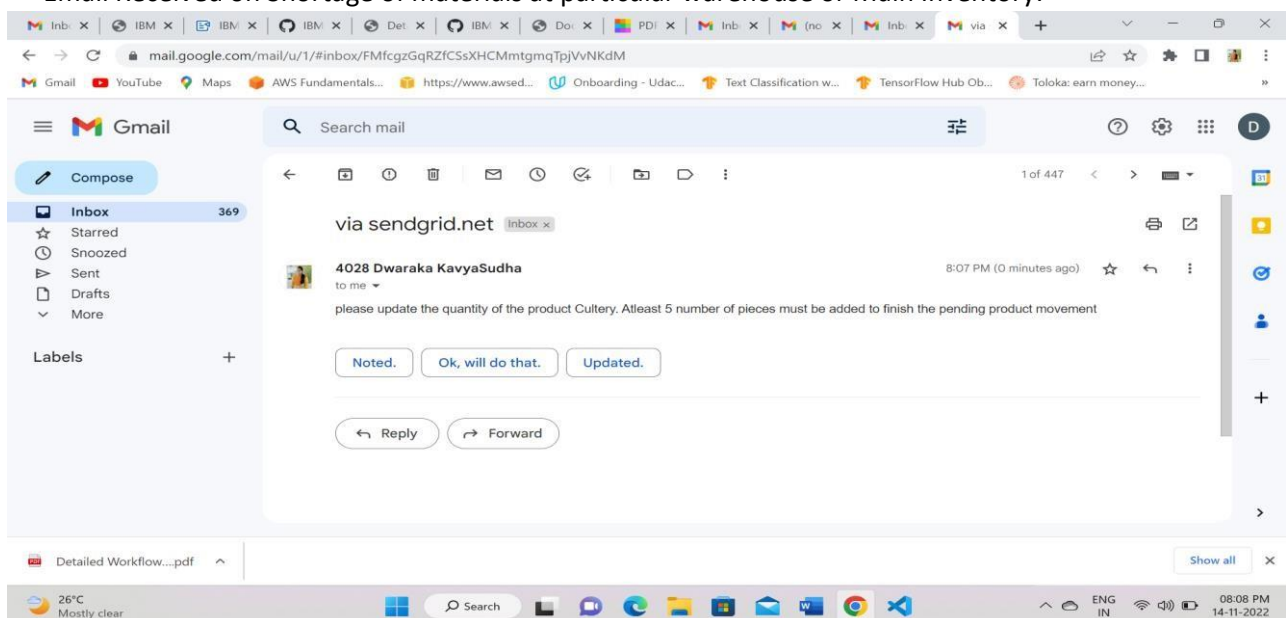

```
1 import smtplib
2 from email.mime.multipart import MIMEMultipart
3 from email.mime.text import MIMEText
4 from email.mime.base import MIMEBase
5
6 def alert(main_msg):
7     mail_from = '191361@psgtech.ac.in'
8     mail_to = '191303@psgtech.ac.in'
9     msg = MIMEMultipart()
10    msg['From'] = mail_from
11    msg['To'] = mail_to
12    msg['Subject'] = 'Alert Mail On Product Shortage! - Regards'
13    mail_body = main_msg
14    msg.attach(MIMEText(mail_body))
15
16    try:
17        server = smtplib.SMTP_SSL('smtp.sendgrid.net', 465)
18        server.ehlo()
19        server.login('apikey', 'API_KEY')
20        server.sendmail(mail_from, mail_to, msg.as_string())
21        server.close()
22        print("mail sent")
23    except:
24        print("issue")
25
```

Email Received on Shortage of materials at particular warehouse or Main Inventory:

Sprint 4 (Deploying the application using Docker and Kubernetes):

Note: Make sure to create a Dockerfile in the project folder.

Login into DockerHub in Project Folder using command prompt. This connects local docker desktop to cloud docker hub.

Create a valid Deployment.yaml file,

```
PS C:\Users\yaswa\Downloads\IBM\IMSR-1> kubectl apply -f deployment.yaml
deployment.apps/ibmimsr created
PS C:\Users\yaswa\Downloads\IBM\IMSR-1> 
```

Create a namespace in IBM Container registry,

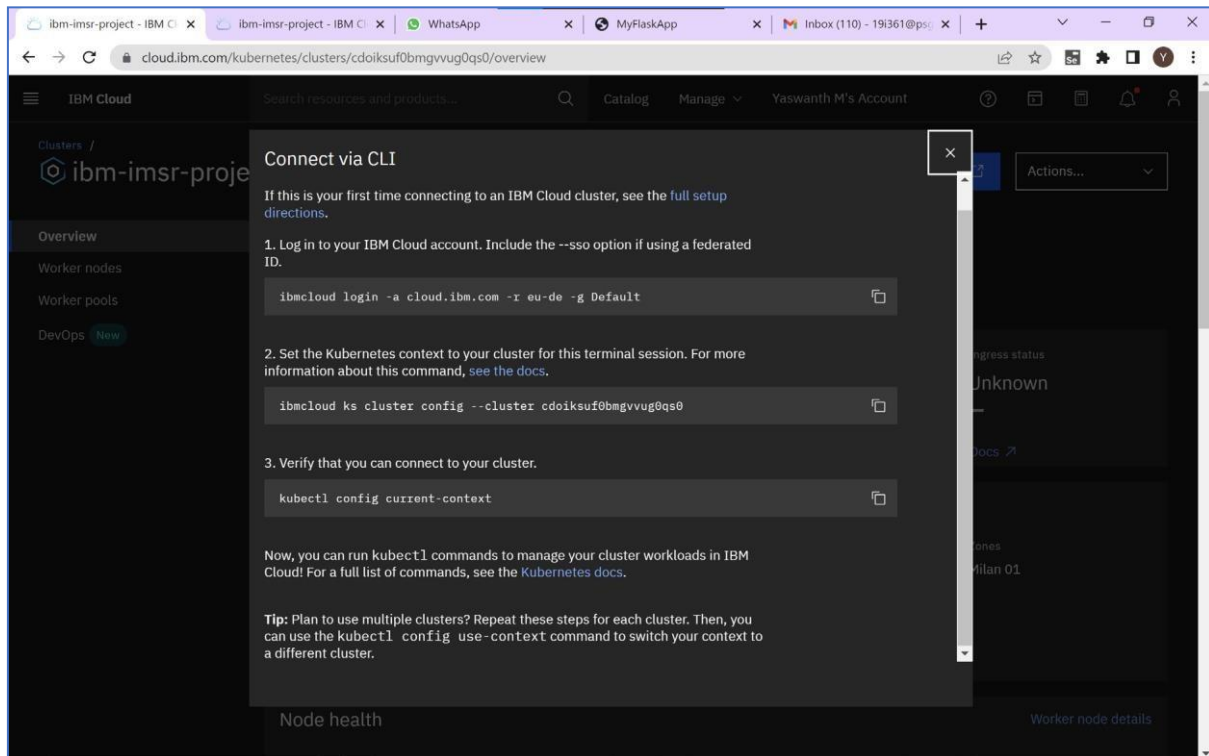

Pushing the project into IBM container Registry,

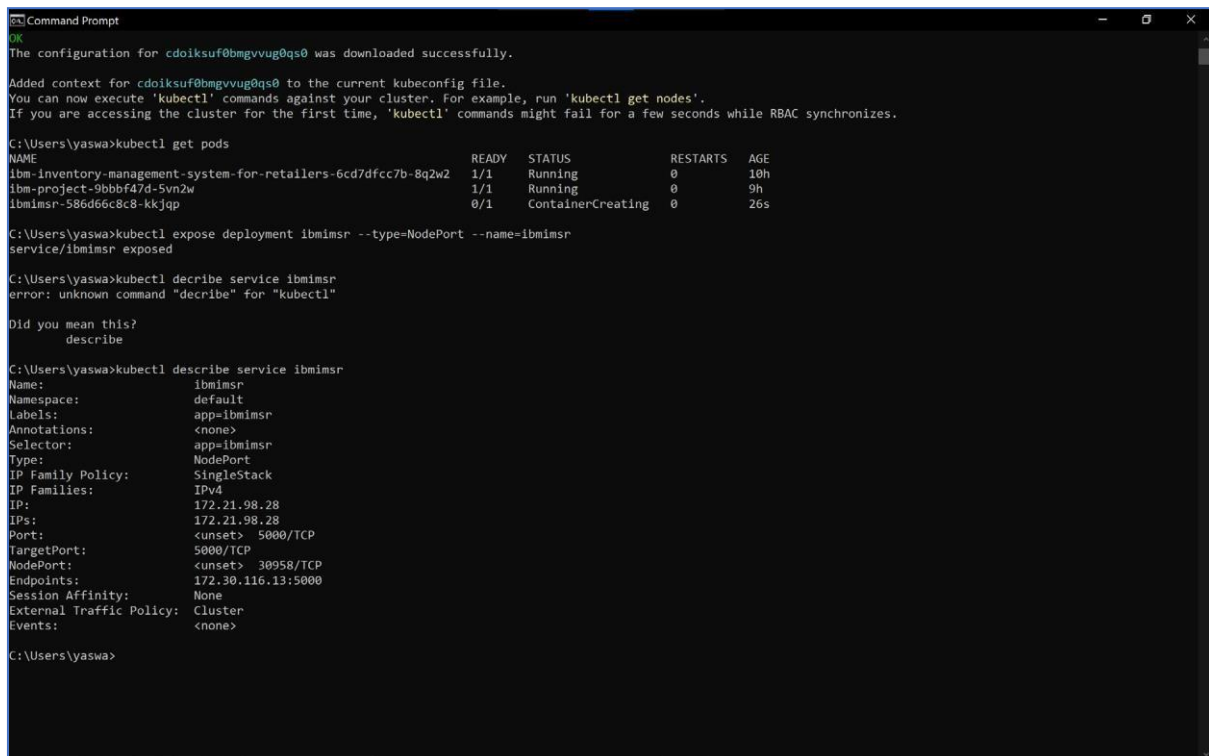

Note: Create a Kubernetes Cluster in IBM Cloud and wait for the work node to get fully deployed.

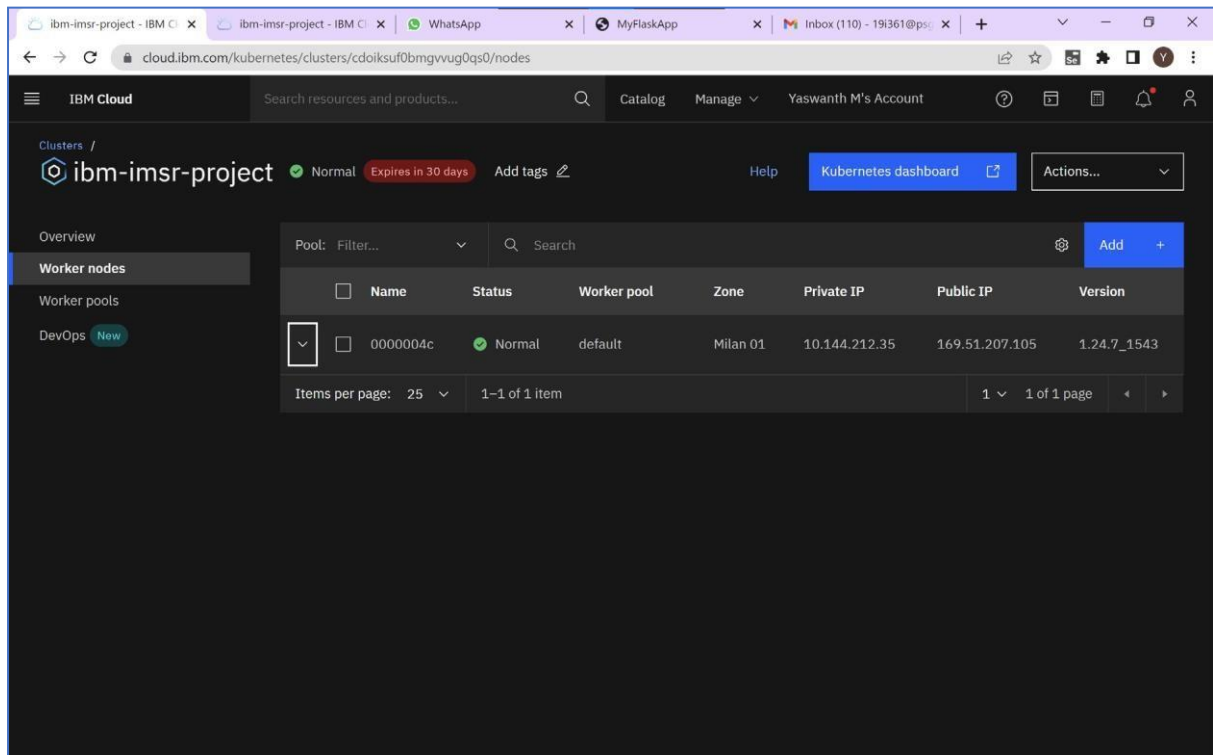

Then, Login into Kubernetes Cluster using the following commands,

Expose your application using the following command and check for the port number using the next command.

Then, Check for the public IP address in your IBM Kubernetes Cluster under Worker Node,

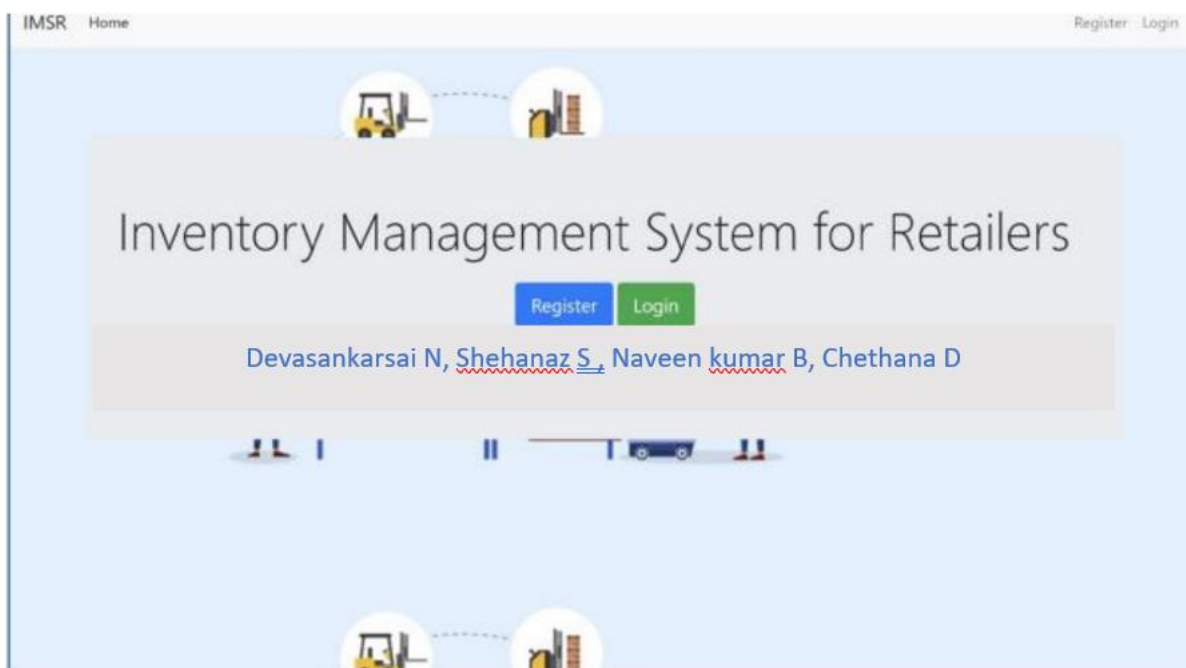

Thus we have the Public IP address and the Nodeport.

Now just type in this format - <Public_IP>:<NodePort>

For our Inventory management system application it is, **169.51.207.105:30958**

Type this in the browser and click enter to access the deployed application,

Result:

Thus In this way We developed a “Inventory management System for Retailers” using Python, Sendgrid and IBM Cloud Services (IBM DB2, IBM Container registry, IBM Kubernetes).

Thank You!
